Master of Science (M.Sc.) in Civil Engineering (hungarian/english)

The goal of the program is to prepare graduates with the knowledge and skills needed for successful practice in all areas of infrastructure engineering. With some practice, they will be able to work in design, technical development, research, leadership, and project management. They will become part of design, consulting and management teams who work on complex engineering structures and systems that make up our everyday life. The program will prepare the graduate to understand and solve problems in his/her specialty, and fulfill leadership roles with technical competencies applying, ethical, environmental, society perspectives. The Master diploma is required for doctoral studies.

- Geotechnical Engineering
- Transport Infrastructure Engineering
- Transport Infrastructure-Geotechnical Engineering
